

# Protect Sensitive Financial Data

In the finance industry, security is the paramount concern of IT administrators as mobile devices are increasingly being used to access sensitive financial data. Employees are optimizing financial investment opportunities by evaluating acquisition targets, analyzing financial performance and accessing client portfolios from mobile devices.

AirWatch® enables financial institutions to secure sensitive data and comply with industry regulations. Our advanced security capabilities help financial institutions – from community credit unions to international financial consulting firms – secure devices, applications and content on both corporate-owned and employee-owned devices.

## Key Benefits for Finance

- Enforce mobile security and maximize Data Loss Prevention (DLP)
- Ensure compliance with local, state and federal regulations, including FIPS
- Secure connections to corporate email, Wi-Fi and VPN networks
- Configure consistent policies, settings and restrictions across devices
- Secure distribution and mobile access to sensitive financial documents
- Develop business apps with key security and management capabilities built in
- Adopt a flexible platform that supports corporate devices and BYOD programs

## Key Features for Finance

### Enhanced Security

AirWatch enables financial institutions to leverage advanced mobile devices and applications without compromising security. Our advanced security capabilities include strong user authentication using AD/LDAP; certificate-based access to enterprise email, Wi-Fi and VPN; and network access control.

### Audit Compliance

AirWatch's advanced compliance engine continuously monitors your device fleet for unauthorized users, compromised devices, blacklisted apps and other risks in accordance with FIPS, SOX and FINRA regulations. When a threat is identified, AirWatch can block access to enterprise email, applications and resources, and lock or wipe a device automatically. And in case you need to perform a fleet audit, AirWatch System Information and Event Management (SIEM) capabilities record and allow you to view both device and console events.

### Secure Content Locker

With AirWatch Secure Content Locker™, financial institutions can securely distribute and access sensitive documents from mobile devices. Transmit documents over industry standard 256-bit SSL encrypted connections and prevent access for unauthorized users or non-compliant devices. Manage users' ability to edit, share or open files in third-party apps; remotely wipe content; and restrict access to a defined location or time of day with geofencing and time-based profiles.

### VPN On Demand

AirWatch provides institutions the ability to provision a VPN profile to devices that automatically configures access to enterprise systems. Our advanced VPN On Demand capability allows mobile users to securely access corporate intranet sites, networks and file systems through a VPN tunnel. This process is invisible to the user, allowing them to continue working without interruption.

### Advanced Features

For institutions developing business applications, the AirWatch Software Development Kit (SDK) embeds core product functionality into your apps, including user authentication, compromised status detection, geofencing, certificates, branding, restrictions, analytics and reporting. AirWatch also provides a collection of APIs that allow external programs to use core product functionality. Enterprises can use these APIs to integrate with existing IT infrastructures and third-party applications.

### AirWatch Browser

Filtering and auditing web traffic is essential to banks, whether in a retail branch or corporate headquarters. With AirWatch Browser™, IT administrators can enforce user authentication and configure a proxy mode, where the browser is tunneled through their network. In a branch setting, a kiosk mode can be configured to restrict browsing to a single website. This secure connection allows you to audit and secure sensitive financial data and company resources.

## About AirWatch

AirWatch was founded in 2003 with the belief that mobile technology would completely revolutionize the way companies do business. Our mission is to develop solutions that empower companies to focus on innovative uses of mobile technology rather than on the complexities of managing mobility. Based in Atlanta with offices worldwide, AirWatch provides enterprise mobility solutions to thousands of companies around the globe.
