# Mobile Content Management

Employees need anytime, anywhere access to corporate content to stay productive. Many employees are taking advantage of free file sharing services to access sensitive documents, putting your organization's corporate data at risk. The proliferation of consumer mobility is driving the need for a simple and ubiquitous content collaboration solution.

AirWatch® by VMware® enables secure mobile access to content anytime, anywhere. AirWatch® Secure Content Locker® protects your sensitive content in a corporate container and provides users with a central application to securely access, distribute and collaborate on the latest documents from their mobile devices.
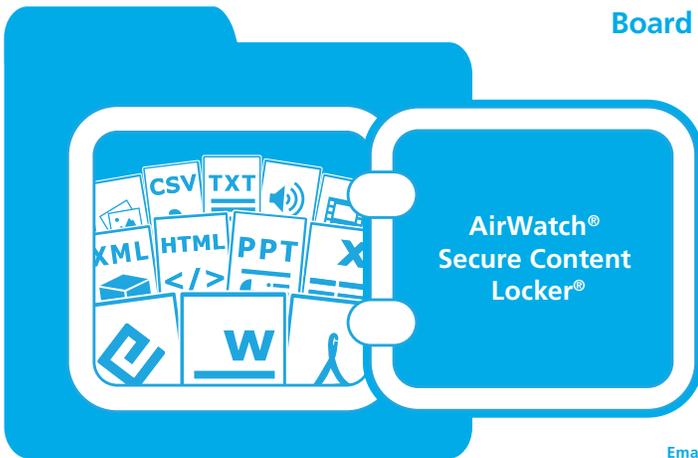

Board Books   **Product Information**   **Electronic Flight Bags**

Patient Charts   **Medical Records**

Planograms   **Training Materials**   **Websites**

Corporate Data   **Legal Briefs**

Textbooks   **Financial Reports**   **Sales Presentations**

Sensitive Emails   **Videos**   **Product Inventory**

Email Attachments   **Classified Documents**   **Employee Handbooks**

AirWatch Benefits

- Ensure real-time access to the latest content
- Ensure compliance with industry regulations
- Increase on-the-go employee productivity
- Enable seamless collaboration across teams

- Prevent data loss of confidential documents
- Eliminate file size sharing restrictions
- Reduce paper costs with traditional printing
- Increase visibility into document analytics

About AirWatch by VMware

AirWatch by VMware is the leader in enterprise mobility management, with more than 14,000 global customers. The AirWatch platform includes industry-leading mobile device, email, application, content and browser management solutions. Acquired by VMware in February 2014, AirWatch is based in Atlanta and can be found online at **www.air-watch.com**.

The Leading Secure Content Collaboration Solution

Anytime, Anywhere Access Across Mobile, Desktop and Web

Protect sensitive content in a corporate container and provide employees with a central access point to content across their mobile devices, desktop or web browser. Access Secure Content Locker mobile application from Apple, Android and Windows devices. AirWatch® Secure Content Locker Sync™ desktop client enables users with two-way synchronization of content from desktops to devices. Secure Content Locker for PC enables users with secure access to corporate content on their personal computers. The web-based self-service portal allows users to add, manage and share personal content.

Enterprise-grade Security Policies and Data Loss Prevention

Authenticate users using AD/LDAP, Kerberos, token and certificate-based methods. Content is encrypted in-transit, in use and at-rest with AES 256-bit, FIPS 140-2 compliant encryption. Configure restrictions for advanced data loss prevention, including offline viewing, cut/copy/paste, printing and emailing; along with 'open in' restrictions.

Flexible Content Storage in the Cloud or Existing Repositories

Meet the unique requirements of your enterprise with flexible content storage options for cloud, on premise and hybrid deployments. Content can be hosted in a public cloud, the AirWatch cloud, an existing content repository or enterprise file share. Additionally, AirWatch Secure Content Locker supports over 30 CMIS integrations.

Content Sharing, Editing, Feedback and Peer Collaboration

Enable users to share files and folders with internal and external stakeholders. Promote collaboration with editing, annotation and commenting capabilities on shared files. Users can mention others to a file by using the @tag feature. Review user actions with the Activity Feed which tracks when a user adds or deletes a file or folder or makes a mention or comment. Utilize the Outlook plugin to minimize clicks for end users and for email attachment security.

Content Creation and Mobile Worker Productivity Tools

Enable users to create content on-the-go from the mobile app, including Microsoft Office and text files. Employees can record audio in Secure Content Locker and ensure these files are protected alongside other corporate data. Remote workers may leverage custom form templates to accommodate unique business workflows on the road and capture photos and videos from their device camera directly within Secure Content Locker.

Content Dashboard and Analytics with Complete Audit Trails

View content inventory at the organization, file or device level with real-time content dashboards in the AirWatch console. Generate and export file and user activity reports, such as how many times a file has been opened, which users have downloaded a particular document and more. Version controls and user analytics provide a full audit trail.

Integrated Solution Developed on the AirWatch Enterprise Mobility Management Platform

The AirWatch® Enterprise Mobility Management Platform was developed from the ground up on a unified code base to scale and grow with the mobility requirements of your organization. Integration with AirWatch® Mobile Device Management, AirWatch® Inbox email client and AirWatch® Browser provides advanced device awareness controls and data loss prevention. Deploy Secure Content Locker as a stand-alone application, with AirWatch Mobile Device Management or within AirWatch® Workspace.
