

## AirWatch Workspace

As mobility becomes an integral part of the way companies do business, addressing the challenges of protecting enterprise data on mobile devices has become critical.

AirWatch enables organizations to standardize enterprise security and data loss prevention strategies across mobile devices through our flexible approach to containerization. Containerization with AirWatch® Workspace provides complete separation of corporate and personal data on devices, securing corporate resources and maintaining employee privacy. With app-level and workspace options for containerization, you can deploy corporate containers to fit your enterprise security requirements.

### Benefits

- Enable device choice for employees
- Separate corporate and personal data
- Manage only corporate data on the device
- Ensure employee privacy is protected
- Provide consistent experience across platforms

### About AirWatch

AirWatch is the world's leader in enterprise mobility management with over 1,600 employees globally. More than 10,000 companies trust AirWatch to secure and manage their mobile enterprise. With market-leading solutions for mobile security, workspace, BYOD, device, application, content, email and browsing, we simplify enterprise mobility.

# Prevent Data Loss Through Corporate Containerization

## Enterprise-grade Security

AirWatch Workspace contains advanced security features to protect enterprise data while maintaining employee privacy. Corporate data within the AirWatch Workspace is secured with FIPS 140-2 encryption and users are authenticated through multifactor user authentication. Securely connect to your existing enterprise systems with app tunneling and the AirWatch® Mobile Access Gateway. Configure advanced data loss prevention settings including copy/paste prevention, download and open-into restrictions, and compromised device detection. Manage policies and compliance in the admin console, and view device analytics and inventory in real-time with reports and dashboards.

## Intuitive End User Experience

AirWatch Workspace enables complete separation of enterprise and personal data on a device. While users see their corporate applications alongside their personal apps, enterprise data is protected within each container. Enable single sign on for corporate apps to allow seamless access without requiring authentication into each app. Customize AirWatch Workspace menu items, backgrounds and text format with custom branding.

## Flexible Deployment Options

AirWatch Workspace offers flexible deployment options to meet your enterprise needs. Deploy only AirWatch Workspace, integrate with AirWatch® Mobile Device Management, or employ a hybrid model to fit multiple user group requirements. Integration with AirWatch Mobile Device Management enables additional security and management capabilities at the device level in addition to the individual container level, including configure passcode, email, Wi-Fi and certificates.

## Containerized Workspace Apps

### Email Container: AirWatch Inbox

Enable secure, containerized access to corporate email, calendar and contacts through AirWatch® Inbox. Configure advanced data loss prevention restrictions within AirWatch Inbox to ensure email and attachment security.

### Content Container: AirWatch Secure Content Locker

Secure distribution of sensitive corporate content, enable easy mobile access, and promote file sync and collaboration with AirWatch® Secure Content Locker™. Seamlessly integrate with existing content repositories and enable advanced data loss prevention restrictions within AirWatch Secure Content Locker.

### Application Container: AirWatch App Catalog

In the AirWatch® App Catalog, users can view, browse, search and install public, internal, recommended and web applications. Administrators can make apps available on demand and manage them remotely. Build custom business apps with the AirWatch® Software Development Kit, or wrap existing internal applications for advanced security with AirWatch® App Wrapping.

### Browsing Container: AirWatch Browser

Enable secure Internet and intranet browsing with AirWatch® Browser. Create custom website whitelists and blacklists, and configure app tunneling to intranet sites without a VPN connection.
